Accidentals

They're used to change the pitch of a note.
There are 4 types:

Name	Symbol	Function
Sharp	**#**	Moves the note that carries it ½ **step** up
Flat	**b**	Moves the note that carries it ½ **step** down
Double sharp	**x**	Moves the note that carries it **1 step** up
Double flat	**bb**	Moves the note that carries it **1 step** down

On the guitar, ½ step is the distance from one fret to the other.

Enharmonics

They're notes that are named differently but their intonation is the same.

Examples:

C# = Db
Cx = D
Dbb = C
